4.4.1 Use-specific instructions for use

Routine disinfection: Disinfection of surfaces, which might be contaminated with pathogens during medical or nursing processes, on a regular basis to reduce the risk of transmission of such organisms via surfaces.
Non-routine disinfection: Disinfection in specific risk situations (unless differently regulated by national public health authorities).

The product is intended for one-step cleaning and disinfection. When used under clean conditions: clean surface before applying the product. For optimum results, hold the bottle upright and spray from a distance of 30 cm. Spray the product onto a dry wipe and wipe small surfaces such as worktops and equipment, or spray product onto the surface, then wipe surface with a clean, dry wipe and leave to dry. Always close the nozzle after use. Used wipes must be disposed of in a closed container.

4.4.2 Use-specific risk mitigation measures

The area of the surface to be disinfected (in m²) must not be larger than 1/10 of the room volume (in m³) e.g. in a room of 120 m³ volume, the maximum surface to be disinfected is 12 m².
