### 4.1 Use description

#### Use 1 - Use # 1 Industrial - CO<sub>2</sub> pressure impregnation

<b>Product type</b>	PT08 - Wood preservatives (Preservatives)
<b>Where relevant, an exact description of the authorised use</b>	Wood preservative for prevention of wood rotting fungi
<b>Target organism(s) (including development stage)</b>	Scientific name: Basidiomycetes: Common name: Brown rot fungi Development stage:
<b>Field(s) of use</b>	Indoor  Use class 2
<b>Application method(s)</b>	Method: Closed system: pressure process Detailed description: Stir before use. SC400 is loaded into a storage tank which is directly connected to an impregnation vessel through a closed loop system. The application process is fully automated. Wood is transferred to the impregnation vessel. SC400 is transferred from a storage tank to a static mixer connected to the impregnation vessel. System is slightly heated (> 35 degrees C) and pressurized with CO <sub>2</sub> which is continuously circulated. At pressure > ~73 bars CO <sub>2</sub> enters supercritical phase. System is pressurized further (>100 bars) and the CO <sub>2</sub> with dissolved product penetrates the wood. System is de-pressurized. Excess SC400 is collected and reused. CO <sub>2</sub> is reused. The treated wood is completely dry at the end of the application and is transferred automatically from the impregnation vessel to a storage area (under roof).
