**SUMMARY OF PRODUCT CHARACTERISTICS FOR A BIOCIDAL PRODUCT**

**PRODIORAT CUB PARAFINAT**

**Product type(s)**

PT14: Rodenticides

**Authorisation number:** RO/2018/0038/MRA/UK-2012-0612

**R4BP asset number:** RO-0008818-0000

---

## 1. ADMINISTRATIVE INFORMATION

### 1.1. Trade name(s) of the product

Trade name(s)	Prodiorat Cub Parafinat
---------------	-------------------------

### 1.2. Authorisation holder

Name and address of the authorisation holder	Name	PelGar International Limited
	Address	Unit 13 Newman Lane GU34 2QR Alton United Kingdom
Authorisation number	RO/2018/0038/MRA/UK-2012-0612	
<i>R4BP asset number</i>	RO-0008818-0000	
Date of the authorisation	22/02/2016	
Expiry date of the authorisation	31/12/2026	

### 1.3. Manufacturer(s) of the product

Name of manufacturer	PelGar International Limited
Address of manufacturer	Unit 13 Newman Lane GU34 2QR Alton United Kingdom of Great Britain and Northern Ireland (the)
Location of manufacturing sites	Unit 13 Newman Lane GU34 2QR Alton United Kingdom of Great Britain and Northern Ireland (the)

### 1.4. Manufacturer(s) of the active substance(s)

Active substance	Bromadiolone
Name of manufacturer	PelGar International Limited
Address of manufacturer	Unit 13 Newman Lane GU34 2QR Alton United Kingdom of Great Britain and Northern Ireland (the)
Location of manufacturing sites	Prazska 54 280 02 Kolin Czechia

---

## 2. PRODUCT COMPOSITION AND FORMULATION

### 2.1. Qualitative and quantitative information on the composition of the product

Common name	IUPAC name	Function	CAS number	EC number	Content (%)
Bromadiolone		active substance	28772-56-7	249-205-9	0,005 % (w/w)

### 2.2. Type(s) of formulation

RB Bait (ready for use)

---

### 3. HAZARD AND PRECAUTIONARY STATEMENTS

Hazard statements	EUH208: Contains 1,2-benzisothiazolin-3-one. May produce an allergic reaction.
Precautionary statements	P102: Keep out of reach of children. P103: Read carefully and follow all instructions. P262: Do not get in eyes, on skin, or on clothing. P270: Do not eat, drink or smoke when using this product. P280: Wear protective gloves. P301: IF SWALLOWED: P310: Immediately call a a POISON CENTER. P405: Store locked up. P420: Store separately. P501: Dispose of container to in accordance with local regulations.

## 4. AUTHORISED USE(S)

### 4.1. Use description

**Table 1. In/around buildings - amateurs**

Product type	PT14: Rodenticides
Where relevant, an exact description of the authorised use	<p>For use indoors and outdoors around buildings.</p> <p>For use against mice, commercially available bait stations (prefilled or refillable) or covered/protected bait points are authorised. For use against rats, commercially available tamper resistant bait stations (prefilled or refillable) only are authorised. For both rats and mice, the bait should be supplied in blocks, each containing at most enough bait for one point (either rat or mouse). The whole pack should contain a maximum of 1.5kg of bait. Bait stations/bait points are manually placed in the rodent infested area. Ideally bait boxes should be fixed to the ground. The product must never be placed indiscriminately.</p>
Target organism(s) (including development stage)	<p>Scientific name: <i>Rattus norvegicus</i> Common name: brown rat Development stage: Adults and juveniles</p> <p>Scientific name: <i>Mus musculus</i> Common name: house mouse Development stage: Adults and juveniles</p>
Field(s) of use	<p>indoor use outdoor use</p> <p>For use indoors and outdoors around buildings. Baits are manually placed in the rodent infested area. The bait product can potentially be used under many different circumstances and can be deployed using various means. The method of deployment is dependent on the particular circumstance. A priority is always to exclude non target exposure as much as possible. Methods of deployment for amateur users are bait stations (tamper proof boxes) or - for mice only - covered/protected bait points. Baits can be placed in bait boxes which may be fixed to the ground. The bait in such bait boxes can also be secured in place to minimise removal and dispersal by rodents. The product may also be placed on trays under a tile or located in such a way that access by non-target organisms is restricted. These methods, in themselves, represent a scale of potential access. The vulnerability (of access by non target organisms) of a particular site is assessed in the decision for the deployment method to be used. The product must never be placed indiscriminately.</p>
Application method(s)	<p>Method: bait application</p> <p>Detailed description: Method of application: bait application; in bait boxes (rats or mice); Covered/protected bait points (mice only). Detailed description of the method: Place bait where there are signs of rodent activity, like fresh droppings, inside or near nests and burrows, runways and rodent feeding places. Place bait points throughout the infested area. For rat infestations use bait points of up to 200g. Place bait points 10 m apart reducing to 5</p>

	<p>m in high infestations. For mouse infestations use bait points of up to 40g. Place bait points 5 m apart reducing to 2 m in high infestations. Make frequent inspections of the bait points during the first 10-14 days and replace any bait eaten by rodents or that has been damaged by water or contaminated by dirt. If no signs of rat activity are seen near a bait point after 7-10 days, move it to an area of higher activity. Mice are very inquisitive. It may help the control programme to move bait points when they are inspected/ topped up. Protect bait points from non-target animals and from water, preferably using commercially available bait stations. For rat control, commercially available tamper resistant bait stations must be used. For mice, if these are not available, place the bait on bait trays inside pieces of drainage pipe or under sections of slate, board or corrugated iron which are firmly propped against a wall and suitably weighted. Prevent access to bait by children, birds and non-target animals (particularly dogs, cats, pigs and poultry). Where possible, secure baits so that they cannot be dragged away. Blocks can be wired or nailed in place. If all the bait has been eaten from certain areas, increase the quantity of bait by placing more bait points. Do not increase the bait point size. It is generally much more efficient to use a larger number of small bait points compared to a smaller number of large bait points. Large bait points increase the risk to wild-life and to other non-target animals. Search for and remove dead rodents at frequent intervals during treatment, at least as often as when baits are checked and/or replenished. Daily inspection may be required in some circumstances. Dispose of dead rodents in accordance with local requirements.</p>
<p>Application rate(s) and frequency</p>	<p>Application rate: For rat infestations use bait points of up to 200g. Place bait points 10 m apart reducing to 5 m in high infestations. For mouse infestations use bait points of up to 40g. Place bait points 5 m apart reducing to 2 m in high infestations.</p> <p>Dilution (%): 100</p> <p>Number and timing of application: The treatment frequency is typically 2-4 applications per year, 3-6 months apart. Baiting programmes are repeated as necessary, due to re-infestation, typically every 3-6 months. The duration of the program is usually up to 6 weeks.</p>
<p>Category(ies) of users</p>	<p>general public (non-professional)</p>
<p>Pack sizes and packaging material</p>	<p>PP or PE, Tubs or pails, 100 g, 150 g, 200 g, 250 g, 300 g, 500 g, 1 kg, 1.5 kg Loose wax blocks of 5, 10, 15, 20, 28 or 100 g packed in above outer packs.</p> <p>Tamper-evident packs.</p> <p>HDPE or PP, Baitbox, Up to 800 g 1. 1 or 2 x 20 g blocks packed in a single or multi-use tamper-proof mouse HDPE or PP bait station, all packed in multiples of 1, 2, 3 or 4 in a cardboard outer.</p>

	<p>2. 1 or 2 x 15 g blocks packed in a single or multi-use tamper-proof mouse HDPE or PP bait station, all packed in multiples of 1, 2, 3 or 4 in a cardboard outer.</p> <p>3. 10, 11 or 12 x 15 g blocks packed in a single or multi-use tamper-proof rat HDPE or PP bait station, all packed in multiples of 1, 2, 3 or 4 in a cardboard outer.</p> <p>4. 8, 9 or 10 x 20 g blocks packed in a single or multi-use tamper-proof rat HDPE or PP bait station, all packed in multiples of 1, 2, 3 or 4 in a cardboard outer.</p> <p>5. 1 or 2 x 100 g blocks packed in a single or multi-use tamper-proof rat HDPE or PP bait station, all packed in multiples of 1, 2, 3 or 4 in a cardboard outer.</p> <p>Covered bait stations (tamper-resistant)</p> <p>Blocks packed on cellophane trays with cellophane wrap, then packed into cardboard cartons, Trays, Up to 1.5 kg Blocks of 15g or 20g in the above pack</p> <p>Tamper-evident packs</p> <p>Double-walled or fibreboard carton, with or without plastic or polythene bag (wire-tied), Carton, Up to 1.5 kg PE, paper/PE, orientated PP, PE/aluminium or paper/PE/aluminium, Sachets, up to 1.5 kg paper/PE/aluminium, PP, PET/PE or laminated PP, Pouches, Up to 1.5 kg PP, Blister packs, Up to 1.5 kg Loose wax blocks of 5, 10, 15, 20 or 28 g packed in above outer packs.</p> <p>Tamper-evident packs</p>

## **5. GENERAL DIRECTIONS FOR USE<sup>1</sup>**

### **5.1. Instructions for use**

Place bait where there are signs of rodent activity, like fresh droppings, inside or near nests and burrows, runways and rodent feeding places.

Place bait points throughout the infested area.

For rat infestations use bait points of up to 200g. Place bait points 10 m apart reducing to 5 m in high infestations.

For mouse infestations use bait points of up to 40g. Place bait points 5 m apart reducing to 2 m in high infestations.

Make frequent inspections of the bait points during the first 10-14 days and replace any bait eaten by rodents or that has been damaged by water or contaminated by dirt. If no signs of rat activity are seen near a bait point after 7-10 days, move it to an area of higher activity.

Mice are very inquisitive. It may help the control programme to move bait points when they are inspected/topped up.

Protect bait points from non-target animals and from water, preferably using commercially available bait stations. If these are not available, place the bait on bait trays inside pieces of drainage pipe or under sections of slate, board or corrugated iron which are firmly propped against a wall and suitably weighted.

Prevent access to bait by children, birds and non-target animals (particularly dogs, cats, pigs and poultry).

Where possible, secure baits so that they cannot be dragged away. Blocks can be wired or nailed in place.

If all the bait has been eaten from certain areas, increase the quantity of bait by placing more bait points. Do not increase the bait point size. It is generally much more efficient to use a larger number of small bait points compared to a smaller number of large bait points. Large bait points increase the risk to wild-life and to other non-target animals.

Search for and remove dead rodents at frequent intervals during treatment (unless used in sewers), at least as often as when baits are checked and/or replenished. Daily inspection may be required in some circumstances.

Dispose of dead rodents in accordance with local requirements.

**PUBLIC AREA USE:** When the product is being used in public areas and tamper-resistant bait stations are not used, the following must be implemented. When the product is being used in public areas, the areas treated must be marked during the treatment period and a notice explaining the risk of primary or secondary poisoning by the anticoagulant as well as indicating the first measures to be taken in case of poisoning must be made available alongside the baits. When tamper-resistant bait stations are used, they should be clearly marked to show that they contain rodenticides and that they should not be disturbed.

### **5.2. Risk mitigation measures**

Baits must be securely deposited in a way so as to minimise the risk of consumption by other animals or children.

Where possible, secure baits so that they cannot be dragged away.

Search for and remove dead rodents at frequent intervals during treatment (unless used in sewers), at least as often as when baits are checked and/or replenished. Dispose of dead rodents in accordance with local requirements.

Unless under the supervision of a pest control operator or other competent person, do not use anticoagulant rodenticides as permanent baits. Remove all baits after treatment and dispose of them in accordance with local requirements.

There is a bittering agent (0.01% denatonium benzoate) in all formulations.

### **5.3. Particulars of likely direct or indirect effects, first aid instructions and emergency measures to protect the environment**

Particulars of likely direct or indirect effects: Anticoagulant rodenticide

Toxic to most mammalian and avian species, including domesticated animals, wildlife and humans.

First aid instructions: Medical advice: If swallowed, seek medical advice immediately and show this container or label.

---

<sup>1</sup>Instructions for use, risk mitigation measures and other directions for use under this section are valid for any authorised uses.

---

Antidote: Vitamin K1 (under medical supervision).

Medical professionals should contact the local Poisons Information Service for further advice.

Emergency measures to protect the environment: Prevent further leakage or spillage if safe to do so. Prevent entry into watercourses, sewers.

#### **5.4. Instructions for safe disposal of the product and its packaging**

This material and its container must be disposed of safely.

Dispose of packaging, remains of unused product and dead rodents in accordance with local regulations.

#### **5.5. Conditions of storage and shelf-life of the product under normal conditions of storage**

Keep in a cool, dry, well ventilated area.

Shelf life of up to 2 years supported.

---

## **6. OTHER INFORMATION**

There are some errors in the CLP phrases which cannot be corrected using the drop-down menus. Complete list of corrected phrases is:

P262 Do not get on skin.

P270 Do not eat, drink or smoke when using this product.

P501 Dispose of contents/container in accordance with local regulations.
