## Justification for removing a substance from CoRAP prior to evaluation

EC/List number	CAS RN	Public Substance name
237-159-2	13674-87-8	Tris[2-chloro-1-(chloromethyl)ethyl] phosphate

**Authority:** Germany

**Date:** 19 March 2024

**The priority for evaluating the substance has been reconsidered based on:**

**The initial hazard ground of concern has been verified and considered of low priority**

Not applicable.

**The initial exposure/risk ground of concern has been verified and considered of low priority**

Not applicable.

**The generation of information under Substance Evaluation is considered of low priority because**

Already ongoing or implemented regulatory process(es)

The eMSCA considers that the substance evaluation of TDCP should be postponed, although the final report for a carcinogenicity study on the structurally related chlorinated phosphate ester TCPP (CAS 13674-84-6) which has been conducted within the scope of the US National Toxicology Programme (NTP) has been published on the NTP website recently. Reason: the eMSCA considers that a request for data via a compliance check (CCH) by ECHA on related endpoints like e.g. mutagenicity is essential before a decision is made on the need to eventually conduct a substance evaluation on TDCP.

Hence, the eMSCA considers that a temporary withdrawal of TDCP is warranted until the CCH has been initiated and further information obtained as a result of the CCH has been assessed.

Registrants' (voluntary) action addresses concern
