#### 4.1.1. Use-specific instructions for use

Use the RTU product undiluted.

The transfer of the impregnation solutions to the dipping tank for manual dipping is done automated by connecting lines or manually.

During manual dipping, the operator lifts and places – by hand – the wooden article into the dipping tank. The operator then pushes, using a post, the wooden article under the wood preservative in the dipping tank and/or uses a broom to brush the wood preservative onto the wooden article (the article is still in the dipping tank as the preservative is brushed on the wood). The operator then lifts manually the wooden article from the dipping tank and stacks the article to dry.

#### 4.1.2. Use-specific risk mitigation measures

Use protective clothing, gloves, eye and face protection during mixing and loading of the concentrated products. Use gloves and protective coverall (coated coverall) during the manual dipping process.

Application solutions must be collected and reused or disposed of as hazardous waste. They must not be released to soil, ground- and surface water or any kind of sewer.

All industrial application processes must be carried out within a contained area situated on impermeable hard standing with bunding to prevent run-off and a recovery system in place (e.g. sump).

Freshly treated timber shall be stored after treatment under shelter or on impermeable hard standing, or both, to prevent direct losses to soil, sewer or water, and that any losses of the product shall be collected for reuse or disposal.

Do not apply near bodies of surface water or in the area of water protection zones.

During application to timbers and whilst surfaces are drying, do not contaminate soil. All losses of the product have to be contained by covering the soil and disposed of in a safe way.

Treated wood should not be intended for uses involving contact with food, feed or livestock.
